

Power To NAV People!

PIVOTIER™

21st Century Reporting for Business Users *and* Developers

Pivotier BIZ

For all of your business users, Pivotier focuses on making reporting **easy**. Your business users will be able to work in their familiar NAV user experience to design reports without programming expertise. Visualization with charts, indicators and gauges ensures that your reports are **modern** and **colorful**. Data is retrieved in **real-time** to ensure accurate and timely information.

Pivotier IT

Your developer productivity is enhanced by using Microsoft's latest and most modern reporting tools such as Report Builder and Visual Studio. Customized reports are enhanced by employing the latest 2008 and 2010 Report Definition Language (RDL) specifications. Generate SELECT statements automatically, design reports with Visual Studio, then embed the reports for **secure** user execution at speeds that are as much as 30 times **faster** than base NAV.

Pivotier WEB

Pivotier is sensitive to the **pervasive** needs of all company personnel to be able to access reports from anywhere. All reports can be published directly to SQL Server Reporting Services (SSRS) for remote access as well as for automated scheduling and distribution. Reports can also be generated in multiple formats such as Excel, PDF, Word and e-mail attachments.

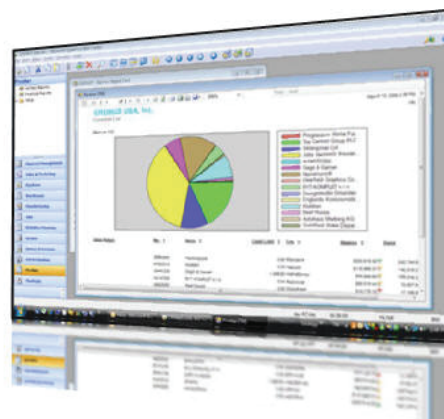

Pivotier RT

Partners, ISVs and headquarters IT staff can create reports centrally, then deploy these for user execution by deploying run-time licenses at customer sites.

Pivotier Suite

Can you see why we say Pivotier is the **RIGHT** Report Writer for Microsoft Dynamics NAV? Pivotier is **fast, modern, real-time, colorful, secure, pervasive and easy**. Pivotier, your choice for reporting, available now.
